

ADA Emergency Elevator Phones

Cabinet Mount

E-1600A– Our most popular and lowest priced model. Compact for mounting in an elevator cabinet. It includes the same features as all our other ADA-compliant Emergency Phones.

E-1600-45A– Same features as the E-1600A above. Painted in safety yellow.

E-1600-EHFA– Same features as the E-1600A above. Built taller and wider, this model is designed to fill the space of an elevator phone cabinet.

E-1600-03B– Same features as the E-1600A above, but built into a 14 gauge brushed stainless steel case with engraved letters. This model is extremely vandal resistant.

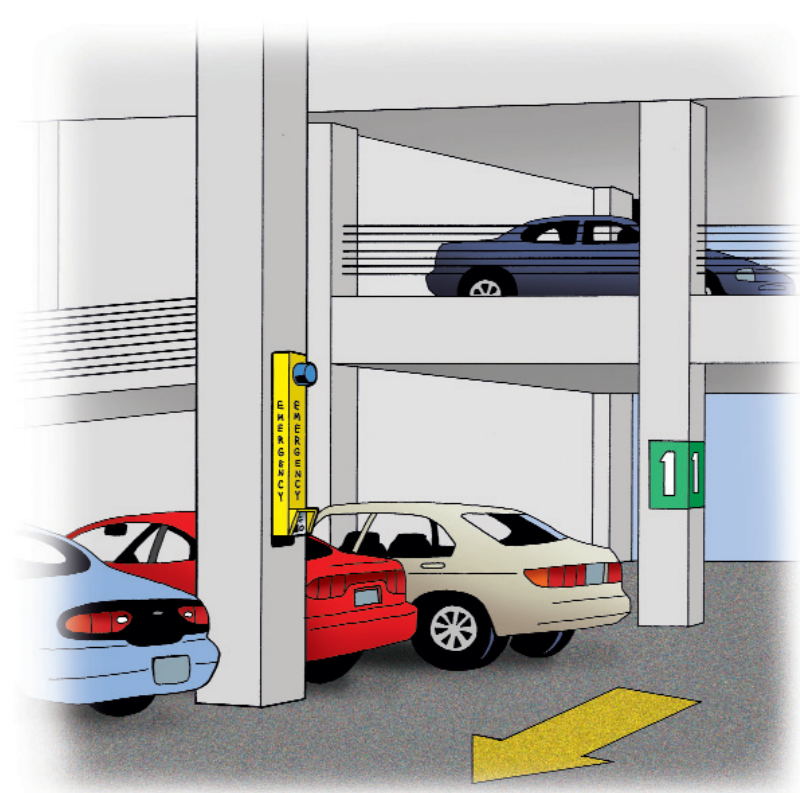

Flush Mount

E-1600-02A– Same features as the E-1600A above, but built into a 14 gauge brushed stainless steel plate for flush mounting. This is the perfect choice for retrofitting your elevator cabs. *Does not require a telephone cabinet.* Simply cut a 5" x 4" opening in the elevator panel and install into the opening. This model is extremely vandal resistant.

Enhanced Weather Protection Ramp and Garage Phones

E-1600-BLT-EWP– Why spend thousands of dollars for a pedestal or stanchion-mount emergency phone when existing pillars and walls can do the same job? The E-1600-BLT-EWP blue light tower phone incorporates the same features as our E-1600A emergency phone, but adds a sturdy wall mount case and a 1,000,000 candle power flashing blue light. Built with EWP technology, this model is perfect for indoor and outdoor operation. Painted in safety yellow for high visibility, this emergency phone is also extremely vandal resistant.

E-1600-EWP

E-1600-45-EWP

E-1600-03B-EWP

These EWP emergency phones have the same features as the phones on the left, except they are built with enhanced weather protection (EWP) technology.

Emergency Phone Accessories–Work with all brands of emergency phones!

BLK-3-EWP– Blue light strobe kit. Add a flashing blue light strobe to any make or model emergency phone! The BLK-3-EWP monitors the phone line to detect ringing or off-hook conditions. It then triggers the 1,000,000 candle power strobe. Eliminates the need to purchase expensive pedestal/stanchion mount emergency phones just to get a flashing light. Run metal conduit to the weatherproof box (included) and mount the assembly to a wall or pillar. Uses EWP technology.

LC-8–Line Concentrator The LC-8 allows up to 8 emergency phones to share a phone line. That can save you a fortune in dedicated phone lines. As soon as an emergency phone goes off hook, the LC-8 directs it to the phone line. If another phone goes off hook, the LC-8 sends a call waiting tone to emergency personnel. Rmergency personnel can switch between calling phones. Incoming calls are answered by the LC-8 and can routed to individual emergency phones. Also works with fire floor phone. Perfect for pooling elevator emergency phones onto a single line.

LSD-2 Line Sharing Device Allows you to share an existing phone line with an emergency phone. Saves hundreds of dollars each year by eliminating a dedicated phone line. As soon as an emergency phone goes off hook, the LSD-2 seizes the line, cancelling any calls that may be in progress and directs new dial tone to the emergency phone. Set up to direct all incoming calls to the regular existing line or sort calls to the emergency phone based on Caller ID or custom ringing.

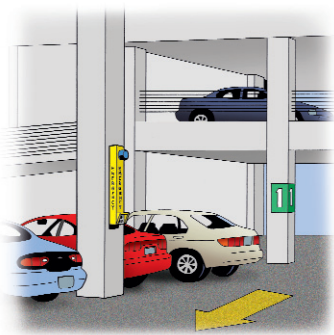

LSR-1 Line Seizure Relay The allows you to share an existing phone line with an emergency phone. The LSR-1 seizes the line when the emergency phone goes off hook. Incoming calls are routed to the standard telephone. If local codes require incoming calls to be routed to the emergency phone, use the LSD-2 instead.

VIKING Emergency Phone Accessories allow you to add features regardless of brand! Retrofit any competitor's phone to add line sharing or Blue Light Strobe.

VIKING Emergency Phones Can Take It!

VIKING Enhanced Weather Protection (EWP) Emergency Phones are specially designed to stand up to the harsh conditions in parking ramps, lots, and indoor garages. The EWP circuit board is encased in flexible urethane compound to protect it from humidity and the corrosive chemicals present in car exhaust.

We hand solder all the connections to eliminate the kind of corrosion that builds up in economy press-on connectors. We use a mylar speaker cone and we seal the push-button switch, LED, and speaker connections with non-corrosive silicone.

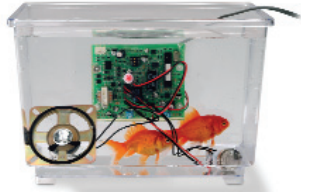

Hand soldered connections eliminate corrosion

Flexible urethane expands and contracts with the weather.

All other connections are sealed in silicone.

The entire phone can operate under water. Now *that's* protection!

VIKING Products are in stock nationwide at major telecom and security distributors.
